

# **EXPERIMENT -5B**

NAME : GAYATHIRI T

ROLL NO : 240701140

**Simulate the life cycle stages for UI design using the RAD model  
and develop a small interactive interface using OpenProj**

## **AIM:**

The aim is to recreate the lifecycle stages of UI design using the RAD model and design a small interactive Cake Ordering App interface using OpenProj.

## **PROCEDURE:**

### **Step 1: Requirements Planning**

#### 1. Gather Requirements:

Identify the key features based on the interface:

- User login using email and password
- User signup with email, password, and confirm password
- Welcome screen with navigation options
- Cake categories such as All, Chocolate, and Strawberry
- Display of cake items with name and price
- Cake details page with image and price
- Buy Now option for purchasing

#### 2. Define Use Cases:

- User logs in with valid credentials
- New user registers an account
- User browses cake categories
- User selects and views cake details
- User clicks Buy Now to purchase

## **Output in OpenProj:**

Create a new project and add tasks such as Gather Requirements and Define Use Cases. Assign duration and dependencies.

## **Step 2: User Design**

### 1. Sketch Initial Designs:

Draw rough sketches for the following screens:

- Login screen
- Signup screen
- Welcome screen
- Cake listing screen
- Cake details screen

### 2. Create Digital Wireframes:

#### Login Screen:

- Email input field
- Password input field
- Login button
- Social login options

#### Signup Screen:

- Email input field
- Password input field
- Confirm password field
- Signup button

#### Welcome Screen:

- Title Cake Your Day
- Buttons for Getting Started, Login, and Signup

#### Cake Listing Screen:

- Categories such as All, Chocolate, Strawberry
- Cake images with name and price

Cake Details Screen:

- Cake image
- Cake name
- Price
- Buy Now button

Output in OpenProj:

Add tasks such as Sketch Initial Designs and Create Digital Wireframes.  
Allocate time and resources.

### **Step 3: Rapid Prototyping**

1. Develop Prototypes:  
Use Axure RP to convert wireframes into interactive screens. Add navigation between pages using buttons.
2. Test Prototypes:  
Check the navigation flow:
  - Login to Home screen
  - Category selection to product listing
  - Product selection to details page
  - Buy Now button functionality

### **Output:**

Interactive prototype of the Cake App

### **Output in OpenProj:**

Add tasks such as Develop Prototypes and Test Prototypes. Define dependencies.

### **Step 4: User Acceptance and Testing**

1. Review Prototype:  
Show the prototype to users and stakeholders for feedback.

## 2. Conduct Usability Testing:

Test the interface for ease of use and collect feedback.

### **Output:**

Documented feedback and test results

### **Output in OpenProj:**

Add tasks such as Review Prototype and Usability Testing. Track progress.

## **Step 5: Implementation**

### 1. Develop Functional Interface:

Finalize the design and implement all features including login, signup, browsing, and product details.

### 2. Integrate Backend:

Connect the interface with backend services for user authentication and order processing.

### **Output:**

Completed Cake Ordering Application interface

## **CONCLUSION:**

The RAD model helped in quickly designing and improving the Cake App interface. Using OpenProj and prototyping tools, an interactive and user-friendly application was successfully developed.
